

PROJECT PROFILE

COZUMEL CONDOMINIUMS
MARCO ISLAND, FL

Three hundred feet above the beach, this 32' diameter fiberglass dome tops off the Cozumel Condominium building in the exclusive Cape Marco Complex on Marco Island, Florida.

The dome was fabricated at Fiberglass Specialties' plant in Henderson, Texas, and shipped in sixteen panels to the jobsite where it was assembled and installed by the contractor.

The dome uses "sandwich-panel" construction, with two layers of 1/4" FRP laminated to a 1.5" light-weight core material. This eliminated the need for steel reinforcements, except for the embedded anchor plates at top and bottom.
