Wall Mounted Cross with Cable Backlighting

Fiberglass Specialties, Inc is pleased to announce a new way to backlight wall crosses. Our new **LED rope** backlighting system eliminates the need for costly and cumbersome ballasts and neon tubes. Made up of small **LED** lights encased in a clear acrylic cable the new system offers long life, lower installed and operating costs, & no maintenance. Best of all, it comes preinstalled in the cross! FSI's cable light system is UL listed, ready to plug into any wall outlet & can be used indoor or out-doors. The average rated life for the system is **100000** hours or about **34** years when operated 8 hours per day. If it ever needs to be replaced, a simple screw-driver and a few minutes time is all it takes!

Average Rate Lamp Life— **100000** hours
.8 watts per foot (about **21** watts for an 8' wall cross)
8' Wall Cross draws **less than** one amp of electricity.
5' power cord plugs into any 120v outlet
